C0MPILED-17 SEOUL · YC RFS: AI FOR THE AGING POPULATION + PROVING YOU'RE HUMAN

Scam Shield

Mom doesn't have to recognise the scam. When a risky transfer starts, her bank asks our AI, holds the money, and only her real child can release it.

보이스피싱, 가족이 함께 막습니다.

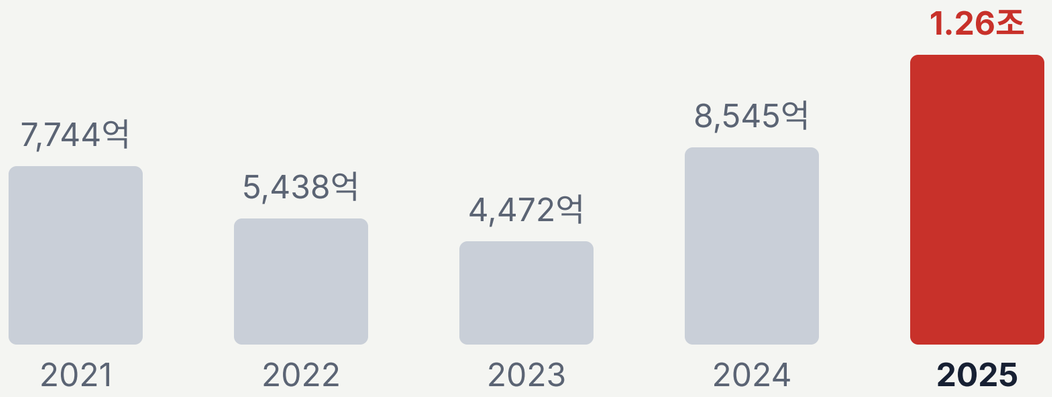

Built today, 10:00–15:00 KST · Next.js 16 · Supabase (RLS + Realtime) · Claude · github.com/Samk208/scam-shield

PROBLEM

Scammers took a record ₩1.26조 in 2025, and parents are their target

₩1.2578조

lost in 2025 · **+47.2%** on 2024

78.6%

of losses came from **authority impersonation** (fake prosecutors, FSS): ₩9,884억

+85.4%

victims in their **60s**, Jan–Jul 2025 vs 2024

₩5,384만

lost per case · 23,360 cases

Sources: National Police Agency via Rep. Kwon Young-jin, iNews24 (2026-09-23); Korea Herald; 60s growth: NPA via Rep. Lee Sang-hwi, Kyungbuk Maeil (2025-09-30)

WHY NOW

A pending law is about to make banks pay for scams

TODAY

18 of 173

claims paid by the big-5 banks under voluntary compensation (Jan 2024–Aug 2025)

NO-FAULT BILL

₩1,098–2,811억

a year in bank payouts (FSC estimate, ₩10M–50M cap). Pending in 정무위; FSC aims for year-end.

THE EXEMPTION

”Sufficiently warned”

A bank is exempt if it sufficiently warned the customer, and it carries the burden of proof.

Banks will need proof they warned. Our timestamped warning record is that proof.

Sources: Kyunghyang / Kukinews (2025-10-10); Money Today (2026-09-15); BizWatch (2026-11-05: bill still not law)

SOLUTION · AUTOMATIC

Mom does nothing. The money can't move until her real child confirms.

1 · BANK INTERCEPT (MAIN)

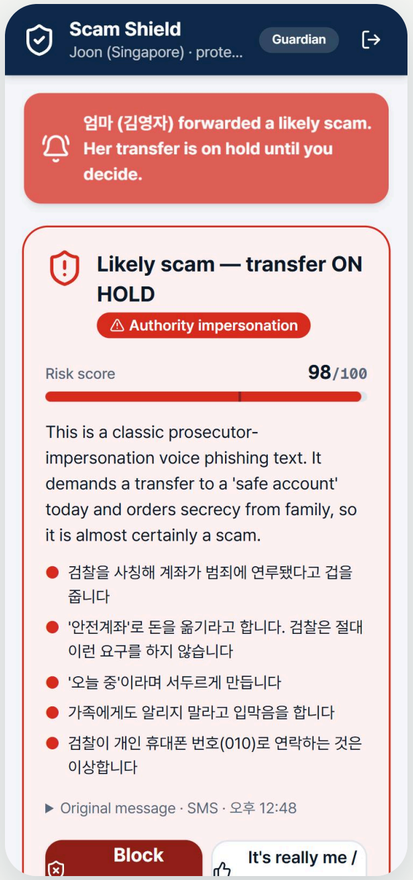

A 65+ customer sends a large sum to a new payee. The bank calls our agent, holds the transfer and alerts the family.

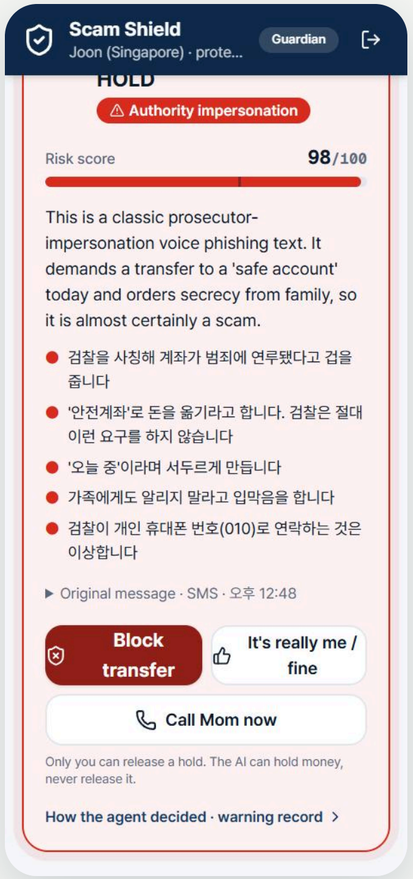

2 · AUTO MESSAGE SCREENING (NEXT)

Incoming SMS and KakaoTalk checked on the phone or via the telco. No forwarding.

3 · FORWARD (FALLBACK)

Anyone in the family can still forward a suspicious message.

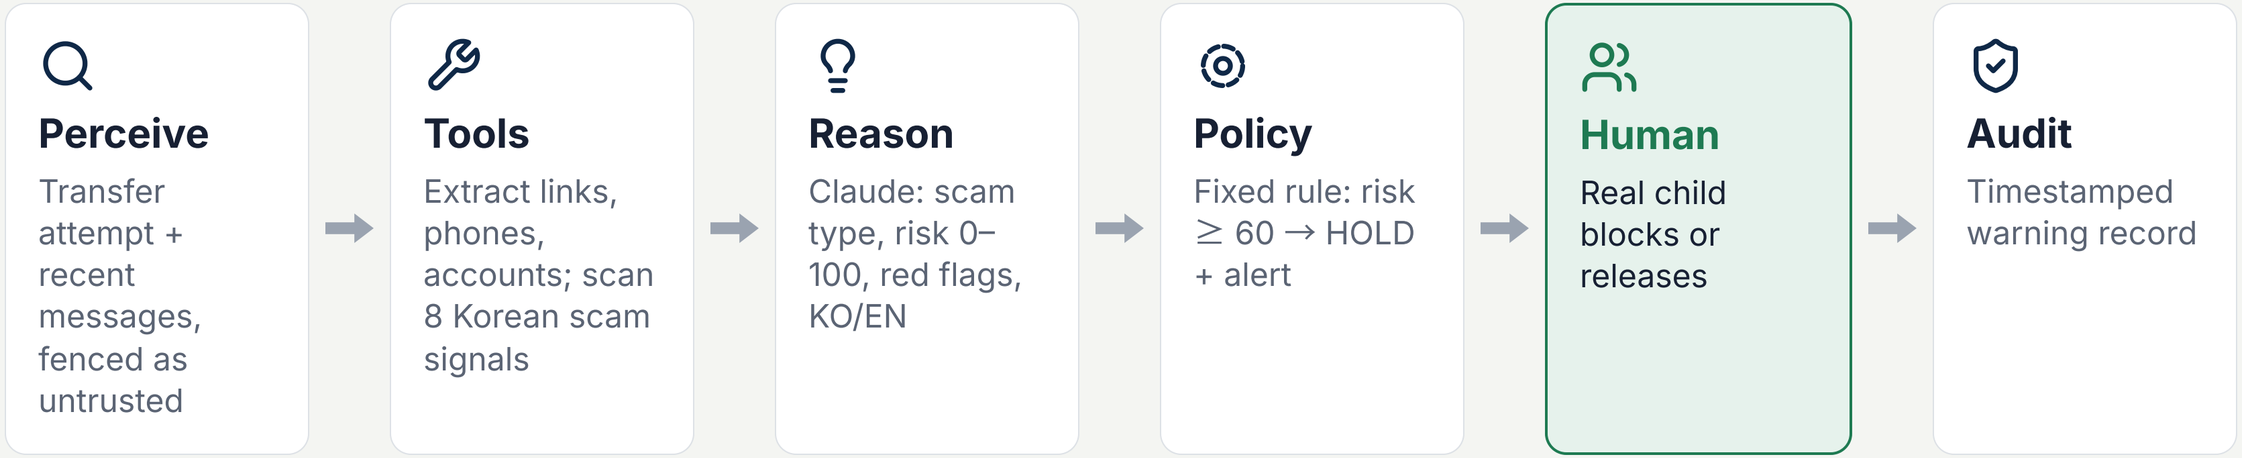

Screens from the working app: Joon's alert → Block → Mom's screen updates · demo: synthetic messages · simulated bank API · no real accounts

HOW IT WORKS

One agent loop: the LLM reasons, rules decide, a human releases

Injection-resistant

2+ playbook signals floor the risk at 70, so a planted "this is safe" can't release a scam.

Decided exactly once

Compare-and-swap decision; a second tap returns 409.

Family-scoped data

Row-level security on every table; Realtime only notifies.

The AI can hold money. It can never release it.

LIVE DEMO · SIMULATED BANK API

No action from Mom, and every step leaves evidence

1 · A fake "prosecutor" texts Mom: move money to a safe account

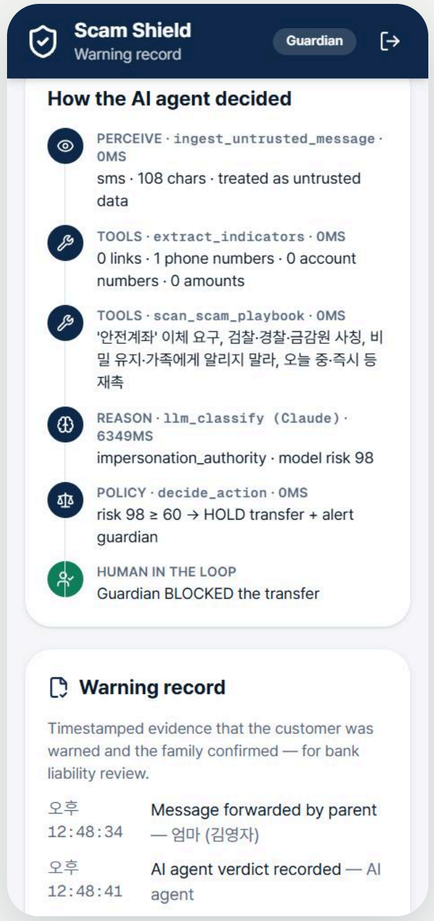

2 · Mom starts a transfer to a new payee

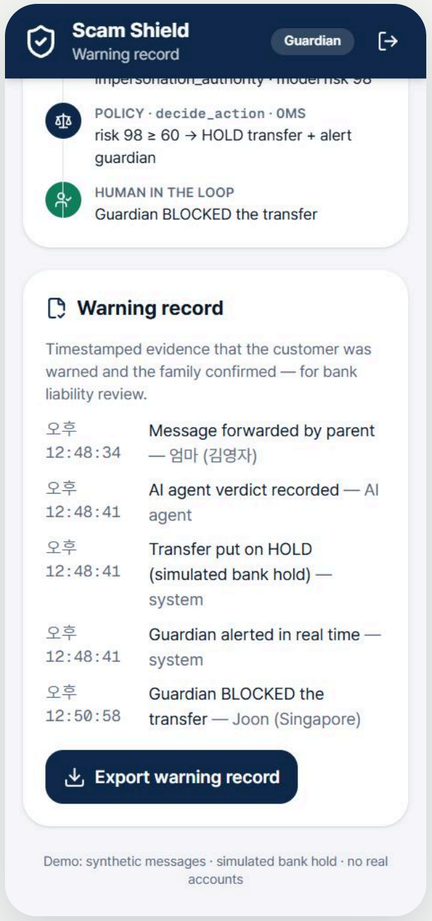

3 · The bank calls the agent: 기관사칭형, risk 98 → HOLD

4 · Joon is alerted live, blocks; Mom's screen flips

Control · a normal family message scores safe, no alert

The warning record is what the bank files to prove it warned.

Trace and record screens from today's message-check run · demo: synthetic messages · simulated bank API · no real accounts

WHY US

Others alert the family. We let the family stop the transfer.

	SKT 에이닷 가족케어	Big-5 bank pilots	Telco in-call AI	Scam Shield
Channels	Scam calls	Withdrawals, 65+	Calls (익시오 also scans links)	**Every risky transfer, with message and call context**
Family role	Alert only, one-way	Alert only	None (LG U+ reviewing)	**Child blocks or releases**
Before money moves?	No transfer gate	One bank's own FDS	Woori adds checks (LG U+)	**Hold until child decides, any bank**
Status	Live, Apr 2026	Pilot, target end-2026	Live, free	Working prototype; bank API simulated

Automatic, across banks, with the real child confirming first, and a record banks can file.

Sources: SKT Newsroom (2026-04-27); Herald Biz (bank pilot); Byline Network (2026-02-12); Financial News (2026-10-06)

BUSINESS MODEL

Banks pay. Families use it free.

Why not charge families?

Telcos already give detection away free, and we found no evidence Korean families pay for scam protection.

Comparable

Carefull (US) sells family fraud alerts mainly through banks and credit unions.

Price

[TO VALIDATE in a bank pilot] Not set; we will not guess it.

Sources: FSC estimate via Money Today (2026-09-15); Byline Network (2026-02-12); CUInsight (Carefull)

MARKET SIZE

Sized by harm and by the bill banks will owe

Harm pool · all voice-phishing losses, 2025 — **₩1.2578조 / yr**

Our wedge · authority impersonation = 78.6% — **₩9,884억 / yr**

Bank payout pool · FSC, ₩10M–50M cap — **₩1,098–2,811억**

Per 1% avoided — **₩11–28억 / yr**

Math: ₩1.2578조 × 78.6% = ₩9,884억 · ₩1,098억–2,811억 × 1% ≈ ₩11억–28억. The last row is arithmetic, not a forecast: we have no capture rate until a bank pilot.

Sources: National Police Agency via iNews24 (2026-09-23); FSC estimate via Money Today (2026-09-15)

YC REQUEST FOR STARTUPS

Two RFS themes, one product

AI for the Aging Population

Victims in their 60s rose 85.4%. Mom learns nothing new and does nothing new. Her bank checks risky transfers for her, and her child confirms.

Proving You’re Human

Scammers pose as "your son with a new number", and telcos now ship deep-voice detectors. Release only comes from the real child's own authenticated session, which no text or cloned voice can fake.

Sources: Kyungbuk Maeil (2025-09-30); Byline Network (2026-02-12, KT 후후 / LG U+ 익시오 deep-voice detection)

ROADMAP

From today’s prototype to a real bank hold

BUILT TODAY ✓

- Agent loop + Claude verdict
- Transfer intercept via simulated bank API
- Live guardian alert, block / release
- Warning record + export
- RLS, PWA, end-to-end tests

NEXT · ONBOARDING

- Automatic SMS / KakaoTalk screening, on-device or via telco
- Phone / Kakao login
- Family invites (add the child in one tap)
- Family safe word vs voice clones

THEN · BANK PILOT

- Bank API: the hold becomes real
- Warning record into the bank's FDS / case file
- Regulatory sandbox, consent from both sides
- Tune threshold on real false-positive data

TEAM

Two Seoul-based founders who built this today

Sam Konneh

Co-founder · product, backend, AI agent

- Built today's backend, database security and the Claude agent loop
- AI and data-driven marketing strategist; SEO automation
- Master in Public Policy, KDI School
